

AMENDMENTS TO THE SPECIFICATION

IN THE SPECIFICATION

On page 13, line 41, please replace the original paragraph with the following amended paragraph:

-- A double-stranded cDNA was synthesized by SuperScriptII reverse transcriptase kit (Invitrogen Co.) with the use of an oligonucleotide having NotI site (GACTAGTTCTAGATCGCGAGCGGC CGCCC(T)₁₅) (SEQ ID NO: 2) (Invitrogen Co.) as a primer, and mRNA derived from human adult whole brain and human fetal whole brain (Clontech Co.) as a template. An adapter having SalI site (Invitrogen Co.) was ligated with the resulting cDNAs. After digestion with NotI, the cDNAs were subjected to electrophoresis on a low-melting agarose of 1% to purify cDNA fragments with 3kb or more.--
